Receipt is acknowledged of the Amendment filed May 4, 2005.

Reasons for Allowance

Claims 1-10 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Taguchi, taken alone or in combination of other references, does not teach or fairly suggest an input buffer comprising, among other things, the control signal that enables the first input buffer when a potential level of the external input signal is smaller than a first reference voltage or larger than a second reference voltage, and the control signal that enables the second input buffer when the potential level of the external input signal is located between the first reference voltage and the second reference voltage (claim 1); the control means that receives an external reference voltage and compares the external reference voltage with an internal reference voltage and then outputs a control signal to select one of the first and second input buffers (claim 3); and a control section for logically combining an enable signal inputted from an external and a control signal, operating the differential buffer when the control signal is in a normal operation state, and operating the CMOS buffer when an input signal including at least one of a command signal and an address signal, is not input from an external, and when a refresh operation is performed (claim 5), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
